#### 1) INTENDED USE

The intended use of this magnetic drill, is to drill holes in ferrous metals. The magnet is used to hold the drill in place whilst the drill is functioning. It is designed for use in fabrication, construction, railways, petrochemical and any other applications when drilling ferrous metal. Any deviation from its intended use will not be covered by warranty.

#### 2) GENERAL SAFETY RULES

WARNING! When using electric tools basic safety precautions should always be followed to reduce the risk of fire, electric shock and personal injury, including the following.

Read all these instructions before attempting to operate the machine.

Remove the power supply before carrying out any adjustment, servicing or maintenance.

- 1. Keep work area clear cluttered areas and benches invite injuries.
- 2. Consider work area environment;
  - Do not expose tools to rain.
  - Do not use tools in damp or wet locations.
  - Keep work area well lit (500 Lux recommended).
  - Do not use tools in the presence of flammable liquid or gases.
  - Ensure there is adequate space to gain access to the plug, mains and motor on/off switches.
- 3. Guard against electric shock:

Avoid body contact with earthed or ground surfaces (e.g. pipes, radiators, cookers and refrigerators). Electric safety can be further improved by using a high-sensitivity (30 m A/0.1s) residual current device (RCD).

- Keep other persons away! DO NOT let untrained persons, especially children, touch the tool or the extension 4. cord and keep them away from the work area.
- 5. Store idle tools when not in use. All tools should be stored in a dry locked-up place, out of reach of children.
- 6. Do not force the machine. It will do the job better and safer at the rate for which it was intended.
- 7. Use the right tool;
  - Do not force small tools to do the job of a heavy duty tool.
  - Do not use this tool for purposes not intended: e.g. do not use the magnetic drill to cut tree logs.
- 8. Dress properly;
  - Do not wear loose clothing or jewellery; they can be caught in moving parts.
  - Non-skid footwear is recommended when working outdoors.
  - Wear a protective hair covering to contain long hair. This will reduce the risk of entanglement.
- 9. Use protective equipment when using this machine;
  - Use safety glasses to prevent debris from damaging eyes.
  - Use ear defenders or ear plugs for hearing protection.
  - Use face or dust masks if cutting operations create dust.
  - Use protective gloves to prevent swarf or debris cutting the skin.
- 10. When using the drill, always ensure a safe operating distance from any swarf and do not reach into the cutting area, or near the cutter, when the machine is running.
- 11. Connect dust extraction and collecting equipment, if devices are provided, ensuring these are properly connected and used.
- 12. Do not abuse the cord; never pull the cord to disconnect it from the socket. Keep the cord away from heat, oil and sharp edges.
- 12. Secure work where possible, use clamps or a vice to hold the work. It is safer than using your hand.
- 13. Do not overreach! Keep proper footing and balance at all times.
- 14. Maintain tools with care;
  - Keep cutting tools sharp and clean for better and safer performance.
  - Regularly check the machine for any wear or damage.
  - Ensure the machine is clean and free from debris prior to use.
  - Remove from the mains prior to any maintenance.

#### Element 30 Manual

#### **Original instructions**

- Follow instructions for lubricating and changing accessories.
- Inspect tool cords periodically and if damaged have them repaired by an authorized Rotabroach service facility.
- Inspect extension cords periodically and replace if damaged.
- Keep handles dry, clean and free from oil and grease.
- 15. Disconnect tools when not in use, before servicing and when changing accessories such as cutters, disconnect tools from the power supply.
- 16. Form the habit of checking to see that keys and adjusting wrenches are removed from the tool before turning it on.
- 17. Avoid unintentional starting. Ensure the magnet is OFF before plugging the machine in.
- 18. Use extension leads only intended for outdoor use when the tool is used outdoors.
- 19. WARNING! The vibration emissions during actual use can differ from the declared total value depending on the ways in which the tool is being used.
- 20. Stay alert! Watch what you are doing, use common sense and do not operate the tool when you are tired. DO NOT operate the machine when under the influence of alcohol or ANY illegal substances.
- 21. Check for damaged or missing parts before use of the tool; it should be carefully checked to determine that it will operate properly for its intended function.
- 22. Warning! The use of any accessory or attachment, other than ones recommended in this instruction manual, may present a risk of personal injury.
- 23. Have your machine repaired by a qualified Rotabroach technician. This electric tool complies with the relevant safety rules. Qualified persons using original spare parts should only carry out repairs, otherwise this may result in considerable danger to the user.
- 24. Never operate the machine if parts are missing or damaged.
- 25. Never direct jets of water orflammable liquids over the drill.
- 26. Operator must be physically able to handle the weight of the machine.
- 27. Operator should be trained in the use of the machine.

- 1. Refer to the user manual for operational and safety issues with regard to this machine.
- 2. Dispose of the machine and electrical components correctly.
- **3.** Eye protection must be worn when operating the machine.
- 4. Ear defenders must be worn when operating the machine.

Maximum hole cutting capacity in .2/.3C steel = 32mm dia. x 35mm deep

Arbor bore = 19.05mm (3/4") dia.

| Motor Unit   |                           |               |              |               |

Ear and eye defenders must be worn when operating this machine. Wear gloves to protect hands when operating the machine.

These tools are UK designed and manufactured with globally sourced components and conform to the requirements of EEC Document HD.400.1 and BS.2769/84

Suitable only for a single phase 50-60Hz A.C. power supply

# DO NOT USE ON D.C. SUPPLY

Do not use your magnetic drill on the same structure when arc welding is in progress.

D.C. current will earth back through the magnet and cause irreparable damage.

# WARNING: THIS APPLIANCE MUST BE EARTHED!

NB: ANY MODIFICATIONS TO THIS MACHINE WILL INVALIDATE THE GUARANTEE

#### **5) OPERATIONAL SAFETY PROCEDURES**

#### READ BEFORE USING THE MACHINE

- When using electrical tools, basic safety precautions should always be followed to reduce the risk of electric shock, fire, and personal injury.
- Ensure the magnet is OFF before plugging in the machine.
- Do NOT use in wet or damp conditions. Failure to do so may result in personal injury.
- Do NOT use in the presence of flammable liquids, gases or in high risk environments. Failure to do so may result in personal injury.
- BEFORE activating the machine, inspect all electrical supply cables (including extension leads), and replace if damaged. DO NOT use if there are any signs of damage.
- Only use extension cables approved for site conditions.
- BEFORE activating the machine, ALWAYS check the correct function of all operational systems, switches, magnet etc.
- BEFORE operating, the machine MUST be securely restrained to a fixed independent feature (by using safety strap RD4329, or other means) to reduce the potential free movement, should the magnet become detached from the work piece. Failure to do so may result in personal injury.
- ALWAYS wear approved eye protectors, ear defenders and recommended PPE at ALL times when operating the machine.
   Disconnect from power source when changing cutters or working on the machine.
- Cutters and swarf are sharp, ALWAYS ensure that hands are adequately protected when changing cutters or removing swarf. Use a tool or brush where necessary to remove any swarf or the cutter from the arbor.
- Before operating the machine, ALWAYS ensure cutter-retaining screws are secured tightly.
- Regularly clear the work area and machine of swarf and dirt, paying particular attention to the underside of the magnet base.
- ALWAYS remove tie, rings, watches and any loose adornments that might entangle with the rotating machinery before
  operating.
- ALWAYS ensure that long hair is securely enclosed by an approved restraint before operating the machine.
- Should the cutter become stuck in the work piece, stop the motor immediately to prevent personal injury. Disconnect
  from power source and turn arbor to and fro. DO NOT ATTEMPT TO FREE THE CUTTER BY SWITCHING THE MOTOR ON
  AND OFF. Wear safety gloves to remove the cutter from the arbor.
- If the machine is accidentally dropped, ALWAYS thoroughly examine the machine for signs of damage and check that it functions correctly BEFORE resuming drilling.
- Regularly inspect the machine and check for any damaged or loose parts.
- ALWAYS ensure when using the machine in an inverted position that only the minimum amount of coolant is used and that care is taken to ensure that coolant does not enter the motor unit.
- Cutting tools may shatter, ALWAYS position the guard over the cutter before activating the machine. Failure to do so may result in personal injury.
- On completion of the cut, a slug will be ejected. DO NOT operate the machine as the ejected slug may cause injury.
- When not in use ALWAYS store the machine in a safe and secure location.
- ALWAYS ensure that approved ROTABROACH<sup>™</sup> agents conduct repairs.

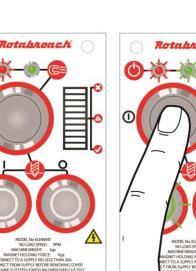

#### 6) OPERATING INSTRUCTIONS

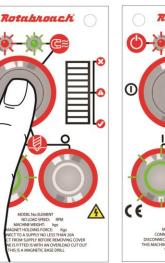

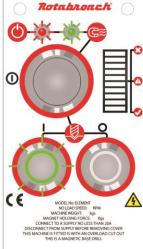

- Keep the inside of the cutter clear of swarf. It restricts the operating depth of the cutter.
- Ensure that the coolant bottle contains sufficient cutting oil to complete the required operating duration. Refill as required.
- Occasionally depress the pilot to ensure cutting fluid is being correctly metered.
- To start the machine follow the control panel operation instructions.
- ALWAYS switch off the motor by depressing the RED stop button. DO NOT switch off the motor by turning the magnet switch to zero.
- Apply light pressure when commencing the cut of a hole until the cutter is introduced into the work surface. Pressure can
  then be increased sufficiently to load the motor. Excessive pressure is undesirable, it does not increase the speed of
  penetration and will cause the safety overload protection device to stop the motor, (the motor can be restarted by
  operating the motor start button), and may cause excessive heat which may result in inconsistent slug ejection
- Always ensure that the slug has been ejected from the previous hole before commencing to cut the next.
- If the slug sticks in the cutter, move the machine to a flat surface, switch on the magnet and gently bring the cutter down
  to make contact with the surface. This will usually straighten a cocked slug and allow it to eject normally.
- Apply a small amount of light oil lubricant regularly to the slide and arbor support bearing.
- Cutter breakage is usually caused by insecure anchorage, a loosely fitting slide or a worn bearing in the arbor support. (Refer to routine maintenance instructions).
- Only use approved cutting fluid. Rotabroach cutting fluid has been specially formulated to maximise the cutters performance. It is available in 1 litre (RD208) and 5 litre (RD229).

ጠ

#### 7) CONTROL PANEL OPERATION

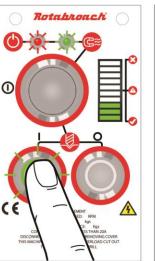

1) Power When the drill is connected to the power supply, the RED LED will indicate power to the drill. 2) Magnet ON To turn the magnet ON or OFF, depress the large button on the control panel. A GREEN LED will indicate the magnet is ON.

**3) Motor switch** When the magnet has power the GREEN switch will light up to indicate motor start.

broach

4) Motor ON Press the GREEN Switch to turn the motor on. Proceed with cutting- following all safety guidelines...

# Rotabroack

5) Cutting See below for detailed description of the CutSmart2<sup>™</sup> visual indicator

CONTRACTOR DE LA MARIENTE DE LA MARI

6) Motor OFF To stop the motor press the RED switch. The motor will stop and t

switch. The motor will stop and the magnet will remain on. The GREEN switch will turn on.

Go back to step 3 to start over.

#### CutSmart<sup>™</sup> Technology

**Green Zone** 

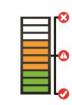

Perfect, try to keep in

the green zone for

optimum machine

the best cut and

performance.

Yellow Zone A little too much pressure on the drill ease off to get back to the green zone.

Red Zone Overload: Back off immediately as too much force will cause the motor to cut off if you continue.

#### CutSmart<sup>™</sup> Technology

Designed for you to get the most out of your machine and your cutters. CutSmart has an easy to read panel that indicates when you are drilling with too much force, which will damage the machine and the cutters.

Allow the cutter to do the work and you will find that a much smoother hole and faster drilling time is achieved.

The machines are factory fitted with a 3 metre length of cable having three conductors 1.5mm<sup>2</sup> LIVE, NEUTRAL and EARTH. If it becomes necessary to fit an extension cable from the power source, care must be taken in using a cable of adequate capacity. Failure to do so will result in a loss of traction by the magnet and a reduction of power from the motor.

Assuming a normal AC supply of the correct voltage, it is recommended that the following extension lengths shall not be exceeded:

For 110v supply: 3.5metres of 3 core x 1.5mm<sup>2</sup> For 230v supply: 26metres of 3 core x 1.5mm<sup>2</sup>

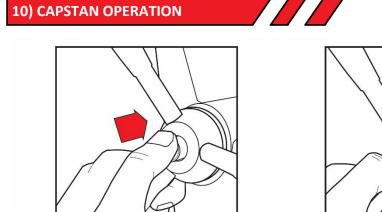

#### ALWAYS DISCONNECT THE MACHINE FROM THE POWER SOURCE BEFORE CHANGING CUTTERS.

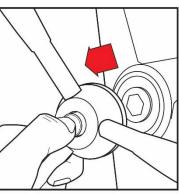

• The machine has been made to accept cutters having 19.05mm (3/4") dia. Weldon shanks.

The following procedure is to be used when mounting cutters:

- Lay the machine on its side with feed handles uppermost, ensuring arbor is wound down to its lowest point to enable access to socket screws RD4066.
- Take appropriate pilot and place through the hole in cutter shank. Insert shank of cutter into bore of arbor, ensuring alignment of two drive flats with socket screws.
- Tighten both screws using hexagon key.

The quick release capstan is a feature offers that offers the user simple dual side operation.

To remove the capstan, simply do the following;

1: Press in the central button on the capstan hub, holding onto the capstan arms.

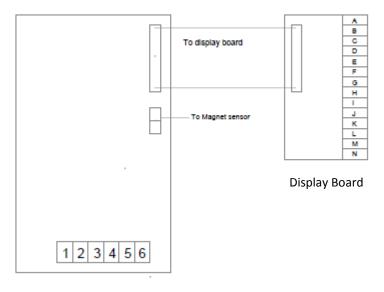

2: With the button pressed in, pull the capstan away from the main body, holding on to the capstan arms.

3: Re-insert the hexagonal shaft into the hexagonal slot to attach the capstan.

# 11) REMEDIES FOR HOLE MAKING PROBLEMS

| Problem   | Cause  | Remedy  |
|---|--|---|
| 1) Magnetic base                                  | Material being cut may be too thin for efficient                                   | Attach an additional piece of metal under the   |
| won't hold  | holding.   | magnet, or mechanically clamp magnetic base to  |
| effectively                                       |  | work-piece.   |
|   | Swarf or dirt under magnet.  |   |
|   | to a state of the second second second second second second                        | Clean magnet.   |
|   | Irregularity on magnet contact or work-piece.                                      | Use extreme care; file any imperfections flush to   |
|   | Insufficient current going to magnet during drilling                               | surface.  |
|   | cycles.  |   |
|   |  | Confirm power supply and output from control unit,  |
|   |  | check supply cable.   |
| 2) Cutter skips                                   | Magnetic base is not holding effectively.  | See causes and remedies above.  |
| out of centre-                                    |  |   |
| punch mark at<br>initiation of cut                | Worn arbor bushing and/or ejector collar.  | New arbor bushing is needed.  |
| initiation of cut                                 | Too much feed pressure at start of cut.  | Light pressure only is needed until a groove is cut.  |
|   |  | The groove then serves as a stabilizer.   |

|   | Poor centre-punch mark; weak pilot spring; pilot not centred in centre-punch mark. | Improve centre-punch and/or replace worn parts  |
|   | centred in centre-punch mark.  | improve centre-punch and/or replace worm parts  |
|   | Worn or bent pilot, worn pilot hole.   |   |
|   |  | Replace part or parts   |
|   | Loose bolts on motor bushing support bracket, main                                 |   |
|   | casting or loose gib adjusting set screws.   | Adjust where necessary  |
| 3) Excessive                                      | Incorrectly re-sharpened, worn or chipped cutter.                                  | Re-sharpen or replace.  |
| drilling pressure<br>required                     | Coming down on swarf lying on surface of work-                                     | Take care not to start a cut on swarf.  |
| required  | piece.   |   |
|   |  |   |
|   | Gibs out of adjustment or lack of lubrication.                                     | Adjust setscrews and lubricate.   |
|   |  |   |
| 4) 5  | Swarf accumulated (packed) inside cutter.  | Clear cutter.   |
| <ol> <li>Excessive<br/>cutter breakage</li> </ol> | Steel swarf or dirt under cutter.  | Remove cutter, clean part thoroughly and replace.   |
| Cutter Dreakage                                   | Incorrectly re-sharpened or worn cutter.   | Always have a new cutter on hand to refer to for  |
|   |  | correct tooth geometry, together with instruction   |
|   |  | sheet.  |
|   | Cutter skipping.   |   |
|   |  | See causes and remedies (2).  |
|   | Slide needs adjustment.  | Tickton could concurrent the sheet of the   |
|   | Cutter not attached tightly to arbor.  | Tighten grub screws supporting the slide.   |
|   | cutter not uttuened lightly to urbon.  | Retighten.  |
|   | Insufficient use of cutting oil or unsuitable type of                              | -   |
|   | oil.   | Inject oil of light viscosity into the coolant-inducing   |
|   |  | ring and check that oil is being metered into cutter  |
|   |  | when pilot is depressed. If not, check pilot groove   |
|   |  | and arbor internally for dirt or apply oil externally.<br>(Even a small amount of oil is very effective). |
|   | Incorrect speed  |   |
|   |  | Ensure correct gear is use for the cutter.  |
|   |  |   |
| 5) Excessive                                      | See cause and remedy above   |   |
| cutter wear                                       | Lesson allow the second of the   | Perfecte interdiance and a set of   |
|   | Incorrectly re-sharpened cutter.   | Refer to instructions and a new cutter for proper   |
|   |  | tooth geometry.   |
|   | Insufficient or spasmodic cutting pressure.  | Use sufficient steady pressure to slow the drill down.  |
|   |  | This will result in optimum cutting speed and chip  |
|   |  | load.   |
|   |  |   |

#### **16)PIPE ADAPTOR KIT RD2311**

#### FITTING INSTRUCTIONS

- Dependent upon the size of the pipe to be cut (see illustrations) attach adjustable angle plates RD3328 with cap screws RD4325 and washers RD4205 (4 off each) to the magnet sides. Do not tighten.
- Locate the machine on the centreline of the pipe taking care that the magnet is in line with the longitudinal axis of the pipe.
- Switch on the magnet and move the sliding plates down to the outside diameter of the pipe. Tighten the screws on both sides by hand then check once again that the full length of the moving plates is touching the pipe at the front and back, fasten the plate securely. Feed the safety strap through the lugs at the front of the housing, around the pipe and pull tight.
- When cutting theholeDO NOT use excessive pressure but rather let the cutter ease into the cutting surface.

**17) FITTING THE CHUCK** 

- To remove the arbor lay the machine on its side.
- Unscrew the two grub screws at the top of the arbor.
- When the arbor has become detached from the spindle this can then be removed.
- Remove the arbor support bracket and guard with the arbor retained.
- Mount the chuck using the chuck adaptor RD33153.
- Replacing the chuck is the reverse sequence.

#### **18) MAINTENANCE**

In order to 'get the best life' out of your Rotabroach machine always keep it in good working order.

A number of items must always be checked on Rotabroach machines.

Always before starting any job make sure the machine is in good working order and that there are no damaged or loose parts. Any loose parts must be tightened.

Before proceeding with any maintenance work be certain that the power supply is disconnected.

| Description          | Every operation | 1 week | 1 Month |
|----------------------|-----------------|--------|---------|
| Visual check of      |                 |        |         |
| machine for damage   | x               |        |         |
| Operation of machine |                 |        |         |
|                      | x               |        |         |
| Check brush wear     |                 | Х      |         |
| Check magnetic base  | X               |        |         |
| Check alignment of   |                 |        | X       |
| the machine          |                 |        |         |
| Check grease         |                 |        | Х       |
| Check armature       |                 |        | Х       |

#### Visually check the machine for damage.

The machine must be checked before operation for any signs of damage that will affect the operation of the machine. Particular notice must be taken to the mains cable, if the machine appears to be damaged it should not be used, failure to do so may cause injury or death.

#### Check operation of the machine.

The machines operation must be checked to ensure that all components are working correctly.

**Machine Brushes** - should be checked to make sure there is no abnormal wear present (this should be checked at least once a week if used frequently). If the brush has worn more than 2/3 the original length the brushes should be changed. Failure to do so may cause damage to the machine.

**Magnetic base** – before every operation the magnetic base should be checked to make sure that the base is flat and there is no damage present. An uneven magnet base will cause the magnet not to hold as efficiently and may cause injury to the operator.

#### Adjustment of slide and bearing bracket alignment.

An essential requirement of the machine is that the slide can move in a smooth and controlled manner, free of lateral movement and vibration.

This situation can be maintained by periodic adjustment of the slide and is accomplished in the following manner:

- 1. Place the machine in an upright position and, by means of the capstan, raise the slide to its highest position. Clean the brass gib strips and apply a small amount of light machine oil to the wear surfaces.
- 2. Now lower the slide back to its lowest position. Bring the slide into the center of the dovetail slide housing and loosen screws thus allowing free movement of the arbor support bracket.
- 3. Commencing with the middle screws, gently feed in all the screws until slight resistance is encountered.
- 4. Operate the slide up and down a few times to test the movement and make any further necessary adjustments. Try to ensure that all the screws are exerting a uniform pressure on the slide from top to bottom. A perfectly adjusted slide will operate freely up and down without any sideways movement.
- 5. Now raise the slide to its highest position. Slightly undo the arbor bearing bracket and, using fingers only, tighten the screws.
- 6. Place the machine on a steel plate, connect to power supply and switch on the magnet. Start up the motor. If the arbor is incorrectly aligned, the arbor support bracket will be seen to oscillate. Make any necessary further adjustments to the bracket to ensure correct alignment of the spindle and finally tighten the screws using a spanner. Lastly tighten the arbor bearing bracket.

#### Check machines grease.

The gearbox grease should be checked once a month to ensure all moving components are covered to prevent wear. The grease should be changed at least once a year to ensure you gain the best from your machine.

#### Check Armature of the machine.

This should be checked at least once a month to check that there are no visual signs of damage to the body or to the commutator. Some signs of wear will be seen on the commutator over a period of time but this is normal (this is the part that comes into contact with the brushes)however, if there are any signs of abnormal damage the part should be replaced.

╶╴

# **19) TROUBLE SHOOTING**

| Magnet and motor do not function  | - The magnet switch is not connected to the power supply  |
|---|---|
|   | - Damaged or defective wiring   |
|   | - Defective fuse  |
|   | - Defective magnet switch   |
|   | - Defective control unit  |
|   | - Defective power supply  |
| Magnet does function, the motor does not                                    | - Damaged or defective wiring   |
|   | - Carbon brushes are stuck or worn out  |
|   | - Defective magnet switch   |
|   | - Defective on / off switch   |
|   | - Defective control unit  |
|   | - Defective armature and/or field   |
|   | - defective protective reed switch  |
| Magnet does not function, the motor does                                    | - Defective magnet  |
|   | - Defective fuse  |
|   | - Defective control unit  |
| Hole cutters break quickly, holes are bigger                                | - Play in the guide   |
| than the hole cutter  | - Bent spindle  |
|   | - Shaft extending from the motor is bent  |
|   | - Pilot bent  |
| Motor running roughly and/or seizing up                                     | - Bent spindle  |
|   | - Shaft extending from the motor is bent  |
|   | - Triangular guide not mounted straight   |
|   | - Dirt between spindle and triangular guide   |
| Motor making a rattling sound   | - Gear ring (bottom of the armature) worn out   |
|   | - Gear(s) worn out  |
|   | - No grease in gear box   |
| Motor humming, big sparks and motor has no                                  | - Armature damaged  |

21) WARRANTY AND CE STATEMENTS

Rotabroach<sup>™</sup> warrants its machines to be free from faulty materials, under normal usage of machines, for a period of 12 months from initial date of purchase. All other parts (excluding cutters) are under warranty for 90 days, provided that the warranty registration card (or online registration) has been completed and returned to Rotabroach<sup>™</sup> or its designated distributor within a period of (30) days from the purchase date. Failure to do so will void the warranty. If the stated is adhered to Rotabroach<sup>™</sup> will repair or replace (at its option) without charge any faulty items returned.

#### This Warranty does not cover:

- 1. Components that are subject to natural wear and tear caused by the use not in accordance with the operators instructions
- 2. Defects in the tool caused by non-compliance with the operating instructions, improper use, abnormal environment conditions, inappropriate operating conditions overload or insufficient servicing or maintenance.
- 3. Defects caused by using accessories, components or spare parts other than original Rotabroach<sup>™</sup> parts.
- 4. Tools to which changes or additions have been made.
- 5. Electrical components are subject to manufacturer's warranty.

Your online registration can be submitted at<u>www.rotabroach.co.uk</u>

The warranty claim must be logged within the warranty period. This requires the submission or sending of the **complete** tool in question with the original sales receipt which must indicate the purchase date of the product. A complaint form must also be submitted prior to the return.

This can be found online at <u>www.rotabroach.co.uk</u>. Failure to complete this form will result in the delay of your claim.

All goods returned defective must be returned pre-paid to Rotabroach<sup>™</sup>, in no event shall Rotabroach<sup>®</sup> be liable for subsequent direct, or indirect loss or damage.

THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, (EXPRESSED OR IMPLIED) INCLUDING ANY WARRANTY OF MERCHANTABLITY OR FITNESS FOR A PARTICULAR PURPOSE. ROTABROACH™ RESERVE THE RIGHT TO MAKE IMPROVEMENTS AND MODIFICATIONS TO DESIGN WITHOUT PRIOR NOTICE

#### Known and Trusted Worldwide for Quality, Performance and Reliability
